EDUCATION

Birzeit University

Bachelor's in Computer Engineering

West Bank, Palestine

Expected September 2027

- **GPA: 94.4 / 100**
- **Honors:** Consistently ranked among the top IT students in Birzeit University for 6 consecutive semesters.

EXPERIENCE

Competitive Programming & Technical Contests

West Bank, Palestine

Problem Solving

June 2024 – Present

- Solved **450+** problems on [Codeforces](#) and [LeetCode](#), applying **data structures, graph algorithms, dynamic programming, greedy algorithms, and computational complexity** to optimize time and space efficiency.
- Achieved **4th and 3rd Place** in two consecutive IEEE Head-to-Head competitions at Birzeit University, solving advanced logic problems under high-pressure constraints.
- Earned **4th Place** in the CES Club Team Competition, collaborating in a team of three to develop solutions for complex problems.

EXALT

Trainee

West Bank, Palestine

Ongoing

PROJECTS

Real-World Bookstore System | Java, MySQL, JavaFX, AES, OOP

January 2026

- Built a full-stack **bookstore management system** supporting **authentication and authorization, inventory management, order processing, reporting, and Admin/Customer workflows**, by designing a layered JavaFX application with MySQL integration and securing sensitive data using **AES-128 encryption**.

Smart University Events Application | Java, Android SDK, SQLite, MVC

June 2026

- Built a feature-rich **Android event management system** supporting **authentication, reservations, reviews, favorites, profile management, and role-based administrator tools**, by designing a scalable **MVC architecture** with a **repository layer** for SQLite persistence, SharedPreferences session management, and Cloudinary image integration.

Process Scheduling Simulator | Java, JavaFX, Operating Systems, Data Structures

January 2026

- Developed a **process scheduling simulator** supporting **Priority, Round Robin scheduling, I/O management, resource allocation, and deadlock recovery**, by implementing an event-driven Java engine with JavaFX visualization and performance analysis.

Multiplayer Game Server | Python, Socket Programming, Multithreading

August 2025

- Built a **multi-threaded multiplayer game server** supporting concurrent client connections, by implementing multithreaded socket communication to synchronize real-time game state with low latency.

Sudoku Generator & Solver | Python, CSP, Simulated Annealing, OOP

December 2025

- Built a **9×9 and 16×16 Sudoku solver** comparing **CSP backtracking** against **Simulated Annealing**, by implementing MRV/MCV/LCV heuristics with forward checking and a cost-based SA optimizer to benchmark solving efficiency.

Transformer-Based POS Tagger | Python, PyTorch, Transformers, NLP

February 2026

- Built a **custom encoder-only Transformer** for POS tagging achieving **95.44% accuracy (87.54% macro F1)** on the Penn Treebank corpus, by implementing **multi-head self-attention and positional encoding** from scratch in PyTorch, validated through an ablation study.

TECHNICAL SKILLS

Languages: Java, Python, C, SQL

Software Engineering: OOP, MVC, Multithreading, Socket Programming, Data Structures & Algorithms

Development: Android SDK, JavaFX, MySQL, SQLite, REST APIs, Git, Maven

Machine Learning & NLP: PyTorch, Scikit-learn, Pandas, NLTK, Hugging Face Transformers (BERT, MARBERT)

Systems: Computer Architecture, Digital Logic Design, Linux
